

Maths Planning

Monday 18th May - Friday 22nd May

This week we are going to follow the lessons on the Oak Academy website.

We are going to be thinking about Addition and Subtraction.

Just do one lesson each day. Work with your grown up, and all we ask is that you try your best.

We want maths to be fun. If you would like to do some practical activities instead of, or as well as following the lessons provided in the link, then here are a few ideas:

Try making an adding machine by recycling any empty boxes or tubes. There are some pictures below to help inspire you, but feel free to make up your own! You could write down the number sentences that you make.

If you have any dice at home you can try making up your own adding number sentences by throwing 2 dice and adding the total number of dots. If you fancy a challenge then roll one of the dice for a 3rd or 4th time and add 3 or 4 numbers together!

Maybe you could make up your own skittle subtraction game. Use any objects that you have at home. (Toilet rolls, Lego towers, empty yoghurt pots) Start with 10 and see how many you can knock over with the ball. Try recording it as a subtraction number sentence. Look at the picture below to help you. Then maybe you can increase the number of objects that you have to knock down. Try 15 or even 20!

If you click on the link below there are some addition and subtraction games and activities that you can try. Also if you have any board games at home ask if your family will play them with you. You could even make up your own simple track game. Don't forget to include some forfeits, e.g. 'Move backwards 3 spaces.'
